- Monitors multiple server protocols
- Also SQL Server, MySQL, Oracle
- Detects hard drive errors
- Monitors CPU, Memory, Network
- Monitors services, applications
- Sends emails, tweets, SMS
- Amazingly easy to use, install
- Minimalist, accessible interface

Know Your Servers

Continuous monitoring enables you to learn about problems and resolve them before they become too serious. Be notified when a hard drive shows signs of a possible malfunction, or when a server connection is down, for example.

Less is More

How many hours have you wasted trying to make complex software work? Or even worse: how many issues are left unresolved because of excessive information? Anfibia Reactor is amazingly easy to use, and avoids unnecessary information.

Fair Conditions

Anfibia Reactor runs on your own server, meaning you have full control over private data and configuration. Before purchasing licenses, you are invited to install and use the full version for 30 days. Pay once. No hidden fees. Support included.

Specifications

Requires a modern web browser.
User's Guide included.
1 year of support included.
Available in English, Spanish, Catalan.
Professional license costs \$199

Reviews & Comments

Reactor gets to the point. (...) It is the easiest, most convenient server monitoring tool I have tested, by far.

Jean Paul Marston, Admin

Evaluation Version

Get Reactor and evaluate it on your system. This is the full version but limited to 30 days.
